NFL Draft Storyboard

Creates a list of players eligible for NFL Draft for current season consisting of player details displayed in list view.

Individual player can be clicked on and the added to the Offense or defense team for the manager.

Draft List can be searched and sorted for players based on all player details.

Owner can select players to draft by clicking on the player and then the button to add Offense Player or Defense player depending on player type.

Final review by owner before completing draft by reviewing list. Can remove players and add new if they choose.

Player Details: String Name, String position, String playerType, String college, int yearsPro, int age, String height, int weight, int touchDowns

Player Class: Player stats included in player class. Only those specific to the player position populate on view when selected

Player List: Includes ability to sort by selecting a specific criteria (Search by Player Name, Search by Position, Search by Player Type, Search by College, Search by Years Pro)

Manager Class: Adds selected player to the owners list of offense or defense players

Final Draft: Manager can remove a player by selecting the list (Offense or Defense), selecting the player, and then clicking the Remove Player button.
